

Recently, Michigan and other states have seen an increased number of bed bug infestations plaguing residents. As bed bugs infest more and more homes, they may find their way into schools. When this happens, the school needs to take proactive action to prevent infestation and stop them from spreading in the school setting.

What are bed bugs?

Bed bugs are small, brownish, flattened insects that feed on the blood of people while they sleep.

Although the bite does not hurt at the time, it may develop into an itchy welt similar to a mosquito bite.

Bed bugs do not transmit disease, but they can cause significant itchiness, anxiety, and sleeplessness. Bed bug infestations are also very difficult and expensive to control.

Usually, bed bugs will hide during the day and only come out to feed during the night. **Unlike head lice, they do not live on a person.** However, they can hitchhike from one place to another in backpacks, clothing, luggage, books, and other items.

Could my classroom be infested?

Actual bed bug infestations in schools are uncommon. More commonly, a few bed bugs will hitchhike to school from an infested home by hiding in a student's clothing or backpack.

Bed bugs that hitch a ride into the school in one student's backpack could be carried home

by another student, making the school a potential hub for bed bug spread. This is not a minor concern – bed bugs are very expensive and difficult to eradicate.

If a school plans to use pesticides to control pests indoors, then they are required under Michigan law to have an **integrated pest management (IPM)** plan in place.

What if I find a bed bug on a student?

If a bed bug is found on a student, it may indicate that the student has bed bugs at home.

However, bed bugs can crawl onto or off of a person (or their belongings) at any time, so it is also possible that the bed bug was brought to school by someone else. If a suspected

bed bug is found on a student or a student's belongings, the following procedures should

be followed:

- The student should be discreetly removed from the classroom. The student's clothing and other belongings.

- The student's parents or guardian to inform them of the bed bug presence on their child.

Educational materials, such as those available at <http://www.michigan.gov/bedbugs> should also be provided to the family.

- **Students should not be excluded from school due to bed bugs unless repeated efforts have been** made to remedy an infestation. Schools should not be closed due to bed bug presence, if pest management is necessary it will normally be targeted to certain areas of the school.

- Ongoing pest management that includes the use of pesticides indoors should be overseen by the

school principal or designee and must conform to the school's integrated pest management plan,

as required by Michigan law (MCL 324.8316).

What can I do to eliminate bed bugs from my classroom?

- DO NOT allow untrained staff to apply pesticides on school property. By law, only IPM trained applicators can apply pesticides (even ready-to-use products like sprays) in schools, and in compliance with the school's IPM plan.

- Backpacks, lunchboxes, and other items that travel back and forth to school can also be inspected daily and sealed in plastic containers to prevent bed bugs from getting into them at home.

- Hard surfaces can be cleaned with standard cleaning products.

- If bed bugs have been found repeatedly in a particular classroom, have the room inspected by a pest management professional or other trained staff.

What if one of my students has an infestation at home?

When a student is dealing with an infestation at home, it is important to be sensitive to their

problem. Although bed bugs have nothing to do with cleanliness or socioeconomic status, there is still a stigma that can come with having bed bugs. As a result, parents may be

hesitant to admit to having bed bugs, and students may not want others to know they have an infestation at home. Students living in an infested home may also feel anxious or tired during the school day.

Schools should work with the parents of any student living in an infested home to develop strategies for preventing the further spread of bed bugs.

- Determine if the infested home is being treated. Home remedies and do-it-yourself treatments

are usually insufficient and could cause negative health effects or produce potential hazards in the home.

- If a parent lacks the financial resources to hire a pest management professional, they can reference the online resources at: <http://www.michigan.gov/bedbugs>.
- In an infested home, parents should store their child's freshly laundered clothing in sealed plastic bags until they are put on in the morning. This prevents bed bugs from hiding in the clothing and being carried to school.
- Backpacks, lunchboxes, and other items that travel back and forth to school can also be inspected daily and stored in sealed plastic containers at home to prevent bed bugs from getting into them.
- At school, the student could be provided with plastic bags or bins in which to store their belongings in order to prevent any bed bugs from spreading to other students' belongings.
- If bed bugs are finding their way into the school, consider notifying the affected classes.
- Continue to use these measures until successful treatment of the home has been verified.
